

Architect Portfolio Platform

SUMMARY

A multi-platform professional portfolio system designed to present a software engineer's professional profile, technical expertise, projects, articles, experience, and social presence.

DOCUMENT METADATA

Project Inception Document Document Version: 1.0 Document Status: Draft Document Type: Project Inception Document

VISION

The vision of the Architect Portfolio Platform is to provide a centralized, professional, and continuously evolving digital representation of a software engineer's career, expertise, projects, technical knowledge, and professional presence.

PROBLEM STATEMENT

Software professionals often maintain their professional presence across multiple disconnected platforms. The project aims to create a centralized portfolio platform while providing a realistic environment for applying software engineering and architecture practices.

BUSINESS OPPORTUNITY

Create a professional digital presence that is centralized, customizable, extensible, multi-platform, API-driven, and continuously maintainable, with a centralized backend API consumed by website, dashboard, and iOS clients.

BUSINESS OBJECTIVES

BO-001 Centralize Professional Information; BO-002 Improve Professional Presentation; BO-003 Improve Discoverability; BO-004 Provide Multi-Platform Access; BO-005 Simplify Content Management; BO-006 Maintain Consistency; BO-007 Demonstrate Engineering Capability; BO-008 Enable Continuous Evolution.

STAKEHOLDERS

Portfolio Owner (Product Owner / Administrator), Recruiter (External User), Hiring Manager (External User), Software Engineer (External User), Architect / Technical Lead (External User), General Visitor (External User), Development Team (Engineering). Primary stakeholder: Portfolio Owner.

PERSONAS

Recruiter (Sarah), Technical Interviewer (Ahmed), General Visitor (Omar), Portfolio Owner (Administrator / Content Owner), including goals, needs, and pain points.

TARGET USERS

Primary users: Recruiters, Hiring managers, Technical interviewers, Software engineers, Technology professionals. Secondary users: Developers, Students, Technology enthusiasts, General visitors. Administrative user: Portfolio Owner.

PRODUCT SCOPE

In scope: Professional profile, professional experience, skills, projects, articles, social profiles, CV, administration, client applications (public website, dashboard, iOS), backend (REST API, database, auth, validation, error handling, logging, testing).

OUT OF SCOPE

Social network, full content publishing platform, job board, e-commerce, real-time chat, complex user management (multi-tenant), microservices for initial MVP.

MVP

Public experience: profile, experience, skills, projects, articles, social links, CV. Administration: login and management of profile, experience, skills, projects, articles, social links, CV. Technical: ASP.NET Core REST API, OpenAPI, persistence, EF Core, auth, validation, global error handling, logging, tests, health checks.

FUTURE RELEASES

Release 1.0 Portfolio MVP; 1.1 Improved Content Management; 1.2 Performance & Caching; 2.0 Analytics; 2.1 Event-Driven Architecture; 3.0 External Integrations; 4.0 Advanced Architecture.

HIGH-LEVEL FEATURES

F-001 Professional Profile; F-002 Professional Experience; F-003 Technical Skills; F-004 Projects; F-005 Articles; F-006 Social Links; F-007 CV; F-008 Admin Authentication; F-009 Portfolio Management; F-010 RESTful API; F-011 Public Website; F-012 iOS Application; F-013 Search; F-014 Caching; F-015 Analytics; F-016 Notifications; F-017 External Integrations; F-018 Event-Driven Architecture; F-019 Advanced Observability; F-020 Distributed Architecture.

SUCCESS CRITERIA

Business success criteria SC-001 to SC-003; technical success criteria SC-004 to SC-010; learning success across business analysis through architecture evolution.

ASSUMPTIONS

A-001 to A-009 covering single owner, low initial traffic/content, external platforms as authoritative, modular monolith initially, incremental development.

CONSTRAINTS

Technical constraints (.NET/ASP.NET Core, REST APIs, iOS client); product constraints (small initial scope, MVP without unnecessary complexity); resource constraints (single developer); compatibility constraints (supported iOS versions).

RISKS

R-001 to R-012 including scope growth, over-engineering, infrastructure time, usability risk, documentation inconsistency, external API limits, security, testing gaps, technical debt, momentum loss, premature microservices, client/backend divergence.

INITIAL PRODUCT ROADMAP

Phase 0 Project Inception through Phase 12 Architecture Evolution, with objectives and deliverables for each phase.

PROJECT PRINCIPLE

Learn → Apply → Document → Evaluate → Improve. Introduce technology only with demonstrated business or technical reason. Goal: build the right system and evolve it as requirements change.

INITIAL PROJECT STATE

Current Phase: Project Inception. Next Phase: Business Analysis. Next Deliverable: Business Requirements Document (BRD).
